

# Secudrive File Server protects your confidential data by managing user rights that allow employees to share and work with the data for work productivity and collaboration

## Safe to share. Easy to work.

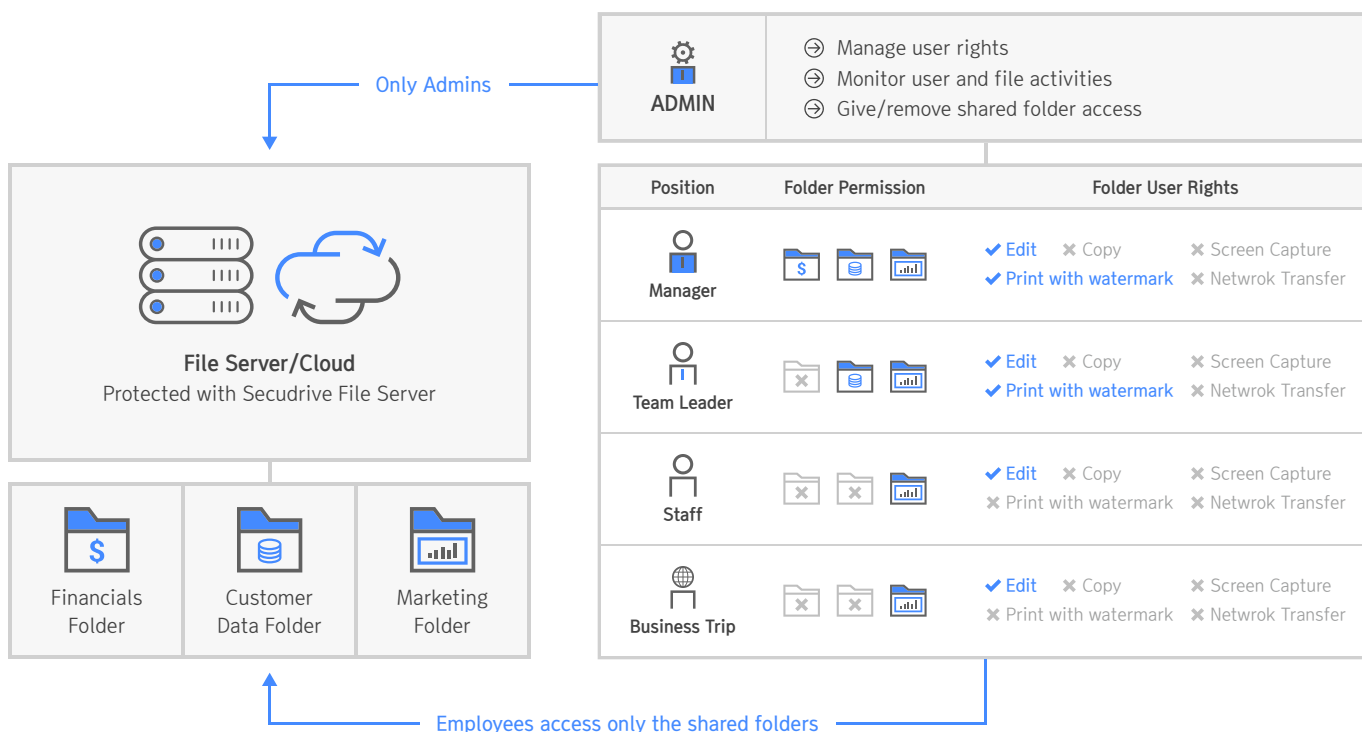

For work productivity, enterprises share and edit files with confidential data in unstructured formats like word, presentations, and CAD files, on file servers or cloud. As this puts confidential data at risk of leakage, it is imperative that enterprises implement data security that will not compromise work productivity. Secudrive File Server helps enterprises to protect files with confidential data in a collaborative workspace that permits secure file sharing and editing to maintain work productivity.

## Data security, inside and out.

To protect the files with confidential data from being breached, enterprises resort to giving the least privilege to the employees. However, those files are far from completely protected, as those with privilege can still leak confidential data by copying the data out of file servers or cloud, accidentally or maliciously. Secudrive File Server implements layered data security by restricting user rights like copying, printing, and screen-capturing of those with privileges to files with confidential data.

### Secudrive File Server Office / CAD

- ⊕ Protects confidential data from malicious or accidental leakage by insider threats and external attacks
- ⊕ Establishes secure, collaborative workspace where users can share and work with confidential data
- ⊕ Provides high operability with streamlined data security architecture for security administrators

## Powerful Data Security and Reliable Control

**User rights management** restricts users' rights to copy, print, screen-capture, and network-transfer files without authorization

**Secure audited copy protocol (SACP)** helps enterprises to safely export the files on Secudrive USB Drives with file encryption, back-up, and log for audits

**Application whitelisting** permits only the whitelisted applications to be installed and run on the file servers to stop ransomware threats

**Comprehensive monitoring** provides visibility of all user and file activities in the file servers in real-time with extensive logs for auditing

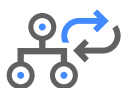

## Effortless Setup and Streamlined Operation

**User-friendly operability** helps any users, even with little or no knowledge of data security, to manage the software with ease

**Straightforward deployment** means easy installation on any file servers and simple security policy setups, all while maintaining existing user and permission settings

**AD environment integration** is seamless for all kinds of existing enterprise-level AD environment and Windows Distributed File System for multiple file servers

**Transparent environment** minimizes productivity interference and keeps confidentiality for the endpoints without the sense of intrusion or being watched

## Solution Specifics

### Operating System Requirements

**File Server Manager** | Windows Server 2008 R2 / 2012 R2 / 2016 (32-bit & 64-bit)

**File Server Client** | Windows 10, 8.1, 8, 7 (32-bit & 64-bit)

### Supported Applications

**Documents** | MS Word, PowerPoint, Excel, Access, OpenOffice, Foxit Reader, Docuworks Desk 7

**Design** | Adobe Photoshop, Illustrator, Flash, MS Paint, Picasa 3, Picasa Photo Viewer 3

**Multimedia** | Windows Media Player, VLC Media Player, BS Player, GOM Player, KMPlayer, Adobe Flash Player

**Text Editor** | Sakura Editor, TeraPad, EditPlus, UltraEdit, Notepad, Wordpad

**Zip** | WinRAR, Lhaplus, 7-zip **Web Browser** | Internet Explorer, Mozilla Firefox

**CAD** | AutoCAD, 3DS Max, Maya, CAM350, DraftSight, DWG TrueView 2008, DWGEditor, eDrawings, OrCAD, P-CAD Solid Edge ST, PTC Creo Parametric 2.0, CATIA, SolidWorks

**Dassault Systems** | Unigraphics NX **Siemens PLM** | AutoCAD MAP 3D, ArcView GIS **Siemens PLM** | EPANET
